DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally **limited to** a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The **form and legal phraseology** often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details. The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Graham '173.

Graham shows a system with means providing a pedaling force to propel a rider on a bicycle utilizing a system (figure 6) which is composed of two fulcrum and lever machines with means to interact with each other in a reciprocal swinging motion as broadly claimed.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Efros '174, Anderson '035, Islas '927 and Bezerra et al '157 disclose a system with means providing a pedaling utilizing a system composed of fulcrum and lever machines interacting means to for reciprocal swinging motion.
